

## NEWS RELEASE

### Teijin to Participate in ISPO Munich

Tokyo, Japan, January 27, 2015 --- [The Teijin Group](#) announced today that in an ongoing effort to further expand sales in the global sports market it will participate in [ISPO Munich](#), the world biggest sportswear exhibition, at Messe München GmbH, from February 5 to 8.

Teijin's booth (Hall: C2, Booth: No.100) will showcase technical materials and products offering exceptional comfort and solutions that help reduce consumption and thereby CO2 emissions due to the use of fossil resources.

The exhibit will include:

- *DELTAPEAK<sup>®</sup>CR*  
This lightweight, thin, three-layer fabric made with water-repellent polyester fibers achieves excellent anti-perspiration comfort through enhanced absorption, quick drying and prevention of chills and stickiness.
- *ECO STORM<sup>®</sup>*  
This lightweight, high-performance material, both waterproof and breathable, features recycled polyester laminated with a thin but highly durable polyester film. *ECO STORM<sup>®</sup>* is ideal for eco-friendly outdoor clothing.
- *DELTAPEAK<sup>®</sup>*  
Teijin Frontier's next-generation fabric realizes a highly integrated combination of physicality, functionality and quality. It offers softness, durability, stretching, ultraviolet protection and anti-transparency, as well as snag resistance due to its dense, flat-knit surface.
- *Odor-Control – Type EP*  
An innovative pH-balanced polyester material that does not irritate human skin, suppresses the growth of harmful bacteria by keeping the surface of clothing attached with sweat weakly acidic, and exhibits antibacterial properties.
- *Bio-derived materials*  
SOLOTEX<sup>®</sup>, a polytrimethylene terephthalate fiber, is highly soft, stretchable, shape-retaining and durable, and is also partially bio-derived. Other partially bio-derived products will also be exhibited.

- *elk*<sup>®</sup>

Teijin's *elk*<sup>®</sup> is a lightweight, durable, cushiony and breathable material that serves as an excellent substitute for polyurethane in a range of cushioning applications, such as mattresses. It is also environmentally friendly because it does not generate cyanogen gas when incinerated.

### **About the Teijin Group**

Teijin (TSE: 3401) is a technology-driven global group offering advanced solutions in the areas of sustainable transportation, information and electronics, safety and protection, environment and energy, and healthcare. Its main fields of operation are high-performance fibers such as aramid, carbon fibers & composites, healthcare, films, resin & plastic processing, polyester fibers, products converting and IT. The group has some 150 companies and around 16,000 employees spread out over 20 countries worldwide. It posted consolidated sales of JPY784.4 billion (USD 7.7 billion) and total assets of JPY 768.4 billion (USD 7.5 billion) in the fiscal year ending March 31, 2014.
